

**GREENFIELD BUSINESS COLLEGE.**

Everybody understands the importance of having an education these days, not necessarily a knowledge of living and dead languages, or of a multitude of isms, but a practical education, one which will fit sensible men and women to transact the ordinary routine of business with safety to themselves and satisfaction to their fellow beings. It has often been contended of course that fortunes have been made by men who had no education whatever, could not even read or write. This is true, but if any young man or woman to-day expects success without a good education they labor under a most serious hallucination. Never before, notwithstanding alarmists' statement to the contrary, were there so many chances for young men and women as there are to-day. Book-keepers, typewriters and stenographers, clerks of all descriptions, all in demand at various salaries and various chances for promotion. The sort of education that it pays the average man or woman to acquire is not that imported in Yale or Princeton, or Wellesley or Vassar, but the practical training given in our modern Business Colleges. Those institutions are placing thousands of men and women annually in lucrative positions who otherwise would be compelled to trudge in the lower walks of life.

The Greenfield Business College is an institution of this kind. Since its inception less than two years ago it has fitted dozens and dozens of young people for good positions as book-keepers, stenographers, clerks, and what is more it has obtained the positions for them. Mr. H. K. Fultz, the principal, is a young man of intense energy with the born teachers instinct for imparting knowledge, a great believer in judicious advertising, and an untiring worker. He is assisted by his estimable wife who is an expert stenographer and typewriter, clerk and accountant.

The enrollment of students is very large and in addition to day classes there are also night sessions, where grown up people whose educations have not been thoroughly completed, may receive great benefit. Many of the large commercial and manufacturing establishments of Ohio, Illinois and other states have in their offices expert bookkeepers and stenographers and typewriters who graduated from the Greenfield Business College.

## BUSINESS COLLEGE REOPENS

It will be good news to the people of Greenfield to know that the Greenfield Business College reopened this week with a large enrollment that is fully up to that of past years, and new students are coming in almost daily and these students must have rooms and board while attending the college. The prospects this year seem very promising indeed for a most successful term and these in charge are elated over the future despite the prevailing financial and business depression that has been very much in evidence for several months.

The college is now under the direct management of Prof. F. R. Charles, who for several years has been assistant in the college and has also had entire charge of all field work in connection with the college. Prof. Charles is a most capable educator, thoroughly reliable and generously fitted to cope with every phase of business college work, and we feel that Prof. Smith has made a wise and valuable decision when he elevated Prof. Charles to the entire management of the Greenfield Business College.

Mrs. Barrett, who has been with the college for several years, is being retained as instructor. Mrs. Barrett has

proved her worth in the past in service to the college and its students and will be welcomed by new students for the first time. She is kind, always ready to answer inquiries and the students love her just as much as if she was a student participating in their studies and pranks. In her line of work her worth cannot be estimated.

The new Stenotypy department, added to the curriculum the first time, is in complete charge of Prof. Richard Smith, son of Prof. L. C. Smith, president of the college. Prof. Smith has just recently completed a course in Stenotypy in Chicago familiarizing himself with this newest of studies. Mr. Clem Bolling, inventor of the Stenotype machine, pictured herewith, was in attendance at the State Fair and in demonstrating the machine in shorthand broke all previous world's records in machine shorthand by writing 350 words per minute. Mr. Bolling is a personal friend of Prof. L. C. Smith. Classes are now being formed in this study.
